Taking this proviso into account, then, that the reader had better have a pretty strong topology and geometry background already. [An Invitation to Morse Theory](#) is a fine book from which to start learning Morse theory.

This self-contained treatment of Morse Theory focuses on applications and is intended for a graduate course on differential or algebraic topology. The book is divided into three conceptually distinct parts. The first part contains the foundations of Morse theory (over the reals). The second part

The second part consists of applications of Morse theory over the reals, while the last part describes the basics and some applications of complex Morse theory, a.k.a. Picard-Lefschetz theory. This is the first textbook to include topics such as Morse-Smale flows, Floer homology, min-max theory, moment maps and equivariant cohomology, and complex Morse theory.

Its Morse polynomial is $P_2;4 D 1 C (2 C (4 C (6$ and thus coincides with the Morse polynomial of the perfect Morse function $(WCP_3 \setminus R)$ investigated in this example.

However, $S^2 \times S^4$ is not even homotopic to CP^3 , because the cohomology ring of $S^2 \times S^4$ is not isomorphic to the cohomology ring of CP^3 . (10)
