The study of commutators of bounded operators on a Hilbert space has a more recent origin, which can probably be pinpointed as the paper of Wintner [6] [1947]. An investigation of a few related topics in the subject is the main concern of this brief monograph. The ensuing work considers commuting or "almost" commuting quantities A and B , usually bounded or unbounded operators on a Hilbert

What could be regarded as the beginning of a theory of commutators $AB - BA$ of operators A and B on a Hilbert space, considered as a discipline in itself, goes back at least to the two papers of Weyl [3] [1928] and von Neumann [2] [1931] on quantum mechanics and the commutation relations occurring there.
