Since the first edition of *Complement in Health and Disease* was published in 1986, significant advances have been made. The cDNAs for all of the components and some of the receptors have been cloned and sequenced.

[Complement in Health and Disease - worldcut.org](#)

The complement system plays a major role in the host's defence against infections and in immune complex diseases. Although it is known to consist of a number of serum and membrane proteins that interact through a cascade, there is still a poor understanding of the exact

nature of the components and their complex interaction.
