Crystal Growth Technology | ScienceDirect
This chapter focuses on the growth of crystals that are surrounded by vapor or other fluid growth media. It focuses on the mechanism of crystal growth seen in relation to a thin growth medium. The chapter discusses what happens after a nucleus is formed and the crystal is grown in size, specifically, how crystals grow and at what speeds. For crystals to grow, some driving force is required. The conditions in any given system change according to the laws of thermodynamics in such a manner
