First the classical models of Prandtl, Ishlinskii, Preisach and Duhem are formulated and studied, using the concept of "hysteresis operator". A new model of discontinuous hysteresis is introduced. Several partial differential equations containing hysteresis operators are studied in the framework of Sobolev spaces.

Differential Models This chapter provides a continuous-time counterpart to the state transition equation, , which was crucial in Chapter 2 . On a continuous state space, (assumed to be a smooth manifold), it will be defined as , which intentionally looks similar to the discrete version.
