Field (physics) - Wikipedia

In physics, a field is a physical quantity, represented by a number or tensor, that has a value for each point in space and time. For example, on a weather map, the surface wind velocity is described by assigning a vector to each point on a map.

Kurt Lewin - Lewin's field theory

With his field theory Kurt Lewin also spoke first time about group dynamics. In a group of persons the interactions cause a power field. The behaviour of the different persons in this group is influenced be this existing power field. Therefore the field theory has also relevance in groups, the same mathematic rules exist, that we noticed in the beginning.
