Astronomy.
Recent Optical Observations of Supernovae |
Highlights of ...
This paper reviews some of the basic optical properties of
supernovae (SNe), concentrating on the most interesting
new observations. It is emphasized that SNe can be
securely subdivided into the two well-known classes (Type
I and Type II) only on the basis of their spectra, since the
light curves alone can be misleading.

and astrophysics
APOD: 2018 June 27 - Highlights of the Summer Sky
Highlights specific to this summer's sky include that
Jupiter will be visible after sunset during June, and Venus
will shine brightly in the evening sky during July and
August. Saturn and Mars should be visible during much of
this season's night, with Saturn appearing in the direction
opposite the Sun in late June, and Mars at opposition in
late July.
