The use of advanced computational methods for the simulation of a broad range of physical processes in different types of advanced composite materials (unidirectional, woven and non-crimp fabrics, nanocomposites) The physical processes addressed include the manufacturing processes, the elastic and
Acoustic Properties of Polyurethane Composition Reinforced ...

This article demonstrates the acoustic properties of added small amount of carbon-nanotube and siliconoxide nano powder (S-type, P-Type) to the host material polyurethane composition.

Evaluation of mechanical properties of four different ...
The mechanical characterization shows a decrease of 39% for the compression property due to the discontinuous fibres in the laminate and an increase of 34% for the interlaminar shear strength

The mechanical response of talin | Nature Communications

To explore the mechanical response of talin we sought to study all 13-rod domains, (R1-R13; residues 482-2482), that make up the FL-talin rod (Fig. 1a,b and Supplementary Fig. 1).

A meso-scale simulation framework for predicting the ...

Green et al. studied the mechanical response of the above mentioned geometry using FE voxel discretisation and found significant differences between nominal and deformed geometry. Further studies on voxel modelling of textile composites, concluded that although the elastic properties are in good agreement with a conventional mesh discretisation, the potential for simulating damage initiation

The development of multiscale models for predicting the ...

The objective of this study is to develop a multiscale analysis model involving multilayer graphene nano-platelets in epoxy to evaluate the effect of GNP on the thermo-mechanical response of GNP/carbon fiber/epoxy hybrid materials and their laminated structures. This multiscale analysis involves various length scales, ranging from nano to composite laminated structures. In this investigation
