Drug-Drug Interaction Mechanisms - Hansten and Horn

When discussing drug interactions, the drug affected by the interaction is called the object drug, and the drug causing the interaction is called the precipitant drug. There are a number of mechanisms by which drugs interact with each other, and most of them can be divided into two general categories: pharmacokinetic and pharmacodynamic interactions.

Mechanisms of drug interactions: pharmacodynamics and ...

Drug interactions are usually considered in terms of three broad classes of underlying mechanisms: pharmacodynamic, pharmacokinetic and pharmaceutical incompatibility. Pharmacodynamics describes the relationship between drug concentration and drug response. Pharmacokinetics describes the relationship between the rates of change of drug concentrations in the different parts of the body.
