swollen head syndrome: Topics by Science.gov
HINTS battery involving head impulse test (HIT), nystagmus, and test of skew is the critical bedside examination to differentiate acute unilateral peripheral vestibulopathy from posterior circulation stroke (PCS) in acute vestibular syndrome (AVS). The highest sensitivity component of the battery has been reported to be the horizontal HIT, whereas skew deviation is defined as the most specific

head neck thorax: Topics by Science.gov
Radiation to the head, neck, and upper thorax of the young and thyroid neoplasia. SciT. Schreiner, R.L. 1976-03-01. It is now generally accepted that an association exists between external radiation administered to the head, neck and upper thorax of infants, children and adolescents and the subsequent development of neoplastic changes in the
