Nuclear force - Wikipedia

The nuclear force (or nucleon-nucleon interaction or residual strong force) is a force that acts between the protons and neutrons of atoms. Neutrons and protons, both nucleons, are affected by the nuclear force almost identically. Since protons have charge $+1$

Meson production in nucleon-nucleon collisions close to ...

The special advantages of nucleon-nucleon induced reactions are stressed. Foremost among these is the use of the initial and nal states as a spin-isospin filter. This opens, for example, a window into the spin-dependence of the hyperon-nucleon
