[Ultrafiltration Membranes - UF Membrane Elements | Applied ...](#)

Ultrafiltration (UF) is a separation process using membranes with pore sizes in the range of 0.1 to 0.001 micron. Typically, UF membranes will remove high molecular-weight substances, colloidal materials, and organic and inorganic polymeric molecules.

[What is ultrafiltration \(UF\) in terms of membrane](#)

[filter ...](#)

Ultrafiltration (UF) is a type of membrane filtration in

which hydrostatic pressure forces a liquid against a

semipermeable membrane. A semipermeable membrane is

a thin layer of material capable of separating substances

when a driving force is applied across the membrane.
