The vascular endothelium is of membrane associated sphingosine by sphingosine

kinase, is involved in cell proliferation and survival, suppression of apoptosis, migration, and

The Endothelium - NCBI Bookshelf

The endothelium, a monolayer of endothelial cells, constitutes the inner cellular lining of the blood vessels (arteries, veins and capillaries) and the lymphatic system, and therefore is in direct contact with the blood lymph and the circulating cells. The endothelium is a major player in the control of blood fluidity, platelet aggregation and

The Vascular Endothelium and Human Diseases

Vascular endothelial growth factor (VEGF) provided the first example of a growth factor specific for the vascular

endothelium. More recently, an entirely unrelated family of growth factors known as the angiopoietins (Ang) and particular members of the very large ephrin family have been identified as having unique effects on the endothelium. Recent insights have led to a model of vascular

Human Vascular Endothelial Cells: A Model System for ...

In this article, we appraise the use of endothelial cell-based methodologies to study vascular inflammation in diabetes and atherosclerosis. **Keywords:** Inflammation, Diabetes, Atherosclerosis, Adhesion, Apoptosis, Vascular biology, Endothelium, Endothelial function, Endothelial cells, Vein, Cell culture, Stem cells

Vascular endothelial growth factor - Wikipedia

Vascular endothelial growth factor (VEGF), originally known as vascular permeability factor (VPF), is a signal protein produced by cells that stimulates the formation of blood vessels. To be specific, VEGF is a sub-family of growth factors , the platelet-derived growth factor family of cystine-knot growth factors.
