Before taking a vibration measurement, you need to attach a sensor that can detect vibration behavior to the machine that is being measured. Various types of vibration sensors are available, but a type called accelerometer is normally used as it offers advantages over other sensors. An accelerometer is a sensor that produces an electrical signal that is proportional to the acceleration of the

Fundamentals of Vibration Measurement and Analysis Explained Thanks to Peter Brown for this article. 1. Introduction: The advent of the microprocessor has enormously advanced the process of vibration data acquisition and analysis in recent years. Measurement tasks that took hours only two decades ago can now be completed in minutes and better decisions made because of better data presentation.

Machine vibration monitoring is the most widespread method to determine the health of rotating equipment. Considering machine repair or replacement costs, loss of production, quality problems, environmental impact and other negative effects of deteriorating machine condition, the implementation of vibration monitoring is well justified.

Vibration Meter | PCE Instruments

The vibration meter is used as a hand-held measuring device for the individual assessment of vibrations on machines and systems. With the help of this vibration meter, the actual state can easily be determined on site.

The Vibration Parameters, Acceleration, Velocity and Displacement, Measuring Units When we looked at the vibrating tuning fork we consid- ered the amplitude of the wave as the physical displace- ment of the fork ends to either side of the rest position. In addition to Displacement we can also describe the movement of the fork leg in terms of its velocity and its acceleration. The form and

vibration at certain frequencies can provide valuable information about the accuracy of shaft alignment and balance, the condition of bearings or gears, and the effect on the machine due to resonance from the housings, piping and other structures. Vibration measurement is an effective, non-intrusive method to monitor machine condition during start-ups, shutdowns and normal operation. Vibration
